

FITO

Cruiser Bike Fender Set Installation Guideline

1.

The bracket with the loops at the end goes to the front fender, One of the small screws that has a nut attached to it secures the bracket on the fender.

2.

After the bracket is on the fender you will attach the fender to the fork as seen in the photos below using the longer screw you received in the bag as well.

3.

After you have on the middle screw on you will use two of the screws that do not have nuts to secure the brackets to the fork.

Cruiser Bike Fender Set Installation Guideline

4.

For the rear fender, you would need to put on the reflector then the bracket with out the loops at the end using the small second screw you received with the nut attached to the end.

5.

Then using the metal bracket that came in the bag you will attach it to the fender, but you would need to measure where to attach it judging by the rear frame in the photo below. After the bracket is on you would secure it to the frame using the second larger screw that came with a nut attached to the end to secure it to the frame.

FITTO

Cruiser Bike Fender Set Installation Guideline

6.

After you will need to secure the bottom on the fender to the frame using one of the screws that came with a nut (shown below) to secure it to the frame in front of the rear tire. You will then attach the bracket to the rear frame (shown below) using the 2 last screws and clips.
